Decision Intelligence for Cybersecurity Operations

TRANSFORMING ALERTS INTO
DEFENSIBLE DECISIONS AT MACHINE SPEED

DEFENSIBLE
DECISIONS

CONSENSUS
INTELLIGENCE

SUB-SECOND
TIME TO DECISION

HUMAN-GOVERNED
AUTOMATION

FROM ALERT
TO **DECISION**
TO **ACTION**

DETECT LESS. **DECIDE FASTER.** RESPOND WITH CONFIDENCE.

2

THE PROBLEM

Security operations are overwhelmed. Alerts are abundant.

Defensible decisions are scarce.

THE PROBLEM

Security teams are flooded with alerts across multiple platforms

Most alerts lack context and require manual investigation

Critical threats are delayed or missed entirely

Response depends on human availability, not urgency

Existing tools detect issues, but do not drive action

THE IMPACT

Slower incident response times

Increased organizational risk exposure

Analyst burnout and fatigue

Inconsistent operational decision-making

Delayed escalation of critical threats

Reduced scalability of security operations

Increased false-positive investigation workload

Higher operational overhead and staffing pressure

3

WHY NOW

The convergence of data, AI, and operational pressure has created an **urgent need for defensible decisions**.

**86%**

of security leaders plan to increase investment in automation and AI in the next 24 months.

Source: Gartner® 2024 Security & Risk Management Survey

1

TELEMETRY EXPLOSION

Security platforms generate more data than human teams can realistically ingest, analyze, and act on.

Global data created in 2025:

181 ZB

Up 61% YoY

Source: IDC DataSphere 2024

2

AI ACCELERATION

AI capabilities are advancing rapidly, creating both opportunity and pressure to operationalize securely.

AI in cybersecurity market projected to reach:

\$46.3B

by 2028

Source: MarketsandMarkets 2024

3

ANALYST BURNOUT

Alert fatigue, talent shortages, and high cognitive load are overwhelming security operations teams.

Cybersecurity analyst turnover rate:

23-31%

annually

Source: (ISC)² Cybersecurity Workforce Study 2023

4

AUTOMATION TRUST GAP

Organizations want automation, but lack confidence in opaque or non-explainable decisions.

74% of security leaders say lack of trust in AI is a top barrier to automation adoption.

Source: Deloitte 2024 Global CISO Report

The industry solved detection. It has not solved **defensible operational decision-making**.

NYX EXISTS TO CLOSE THAT GAP.

4

INTRODUCING NYX

NYX transforms fragmented security telemetry into **defensible operational decisions** while preserving **human oversight** where it matters most.

CONSENSUS DECISION ENGINE

1

INGEST

Correlates telemetry from existing security platforms

2

DECIDE

Produces explainable consensus-based decisions

3

ACT

Routes actions to automation or human review

HUMAN-GOVERNED AUTOMATION

Human approval for high-risk actions

Policy-driven escalation paths

Explainable audit trails

Parallel deployment model

Consensus confidence validation

From **alert** → **decision** → **action**

NYX closes the gap between detection and response with **explainable, defensible decisions** at machine speed.

OBSIDIAN
DEFENSE SYSTEMS

THE NYX DECISION WORKFLOW

From fragmented telemetry to defensible action

FROM ALERT → DECISION → ACTION

NYX
DECIDE WITH CONFIDENCE

6 COMPETITIVE POSITIONING

NYX is not another tool. **It's the decision layer security operations have been missing.**

CATEGORY	TRADITIONAL TOOLS	WHAT THEY DO	NYX (DECISION LAYER)
 SOAR PLATFORMS (Closest, but still wrong category)	   	- Automate workflows - Execute playbooks - Integrate tools	 Produces dynamic, explainable decisions. <i>SOAR = if this → then that</i> <i>NYX = understand → evaluate → decide</i>
 SIEM / DETECTION PLATFORMS	   	- Aggregate logs - Detect threats - Generate alerts	 Determines what to do about it. SIEM tells you something happened. NYX tells you what to do.
 EDR / XDR PLATFORMS	   	- Endpoint detection - Some automated response	 Makes cross-platform decisions with full context. EDR makes isolated decisions within its own ecosystem.
 AI SECURITY / COPILOTS	  	- Assist analysts - Summarize alerts - Provide recommendations	 Produces decisions. Copilots assist humans. NYX produces decisions.
 GRC / RISK PLATFORMS (Indirect, but important)	  	- Track risk - Manage compliance - Document decisions	 Generates decisions in real time, with auditing built in. They document decisions after the fact. NYX generates them.

NYX operates as a **decision layer** above existing security tooling.

Most tools stop at detection or automation.
 NYX focuses on the missing piece—**defensible decision-making**.

NYX OPERATIONAL ARCHITECTURE

A **decision intelligence layer** that sits above your existing stack.

SECURE BY DESIGN

End-to-end encryption

Least privilege access

Data residency support

SOC 2 aligned

OBSIDIAN
DEFENSE SYSTEMS

PROTOTYPE VALIDATION

NYX transforms alert volume into
operational decision speed.

NYX Decision Console

Source-aware decision intelligence powered by the Trinity Engine.

Run ID: 0e0938ea-b9c1-4caa-9361-18f8db0845a3

Policy: balanced

Operational Monitoring Mode

Different by design. Direction is clear.

 Total Decisions 2042	 Visible 2042	 Open Incidents 958	 Review Required 154	 KEV Overrides 0	 Avg TTD <0.001s
 Estimated Noise Reduced 53%	 Estimated Analyst Time Saved 108.4 hrs	 Autonomous / Assisted Split 1888 / 154	 Blocked / Failed 3		
 Ready For Execution 0	 Executed 2				

EXECUTIVE VALUE

NYX is processing operational monitoring telemetry and converting infrastructure alert volume into an action-oriented decision queue. The value is not more alerts. The value is faster, explainable decisions with source evidence attached.

4,000+
ENTERPRISE ALERTS

Processed through
the NYX prototype

30 DAYS
OPERATIONAL TELEMETRY

Based on 30 days of enterprise
operational telemetry

108.4 HOURS
ANALYST TIME SAVED

By automating decision
triage and correlation

< 1 SECOND
AVERAGE TTD

From alert ingestion to
operational decision

HUMAN-GOVERNED
HIGH-RISK REVIEW

Human review preserved for
critical or high-impact actions

OBSIDIAN DEFENSE SYSTEMS

9 PILOT DEPLOYMENT MODEL

Deploy **alongside** your existing stack. Validate value fast. **Scale with confidence.**

OBSIDIAN
DEFENSE SYSTEMS

10 THE FUTURE OF SECURITY OPERATIONS REQUIRES DEFENSIBLE DECISIONS.

NYX is the **decision layer** security operations teams have been missing—bringing **clarity**, **confidence**, and **control** to every decision.

DEFENSIBLE

Every decision is explainable, auditable, and governed.

INTELLIGENT

Trinity Consensus Engine delivers context-aware, multi-perspective reasoning.

ACTIONABLE

From insight to action with confidence and speed.

HUMAN-CENTERED

Humans stay in control—AI handles the complexity.

NYX doesn't replace your stack.
It completes your capability.

DETECTION FINDS THREATS. • NYX MAKES THE DECISIONS THAT MATTER.

OBSIDIAN
DEFENSE SYSTEMS

A woman with long dark hair and glowing purple eyes is the central figure. She is surrounded by a complex network of glowing purple lines and dots, resembling a digital or neural network. The background is dark with scattered purple light points.
